  Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                        % Search time 52.4483 Seconds

                                                                           AAY17535 to AAY17624 represent exendin peptide agonists. Exendins are peptides that are found in the venom of the Gila-monster, a lizard endogenous to Arizona and Northern Mexico. The peptide agonists are used to treat diabetes mellitus (types I or II), hyperglycaemia or hypotyloaemia. They can also be used for in vitro and in vivo studies on exendins and their agonists. They regulate gastric motility and slow gastric emptying (resulting in lower post-prandial glucose levels).
                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The patent discloses a method for modulating plasma or postprandial triglyceride and other lipid levels by administering exendin or an exendin agonist. Exendins have intouropic and diuretic effects. They suppress the secretion of glucagion. Exendin and its agonists have a significant effect on the reduction of blood serum triglyceride concentrations. They are used to treat concent heart disease and dyslipidaemia, and for modifying postprandial triglyceride levels. The present peptide sequence is an agonist of exendin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Use of exendin and exendin agonist compounds for modulating triglyceride levels, and treating heart disease and dyslipidemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Exendin agonist; antilipemic; cardiant; triglyceride; inotropic; diuretic; coronary heart disease; dyslipidaemia.

The invention relates to the use of an exendin (AAB64181-B64182) or an exendin agonist (AAB64185-B66368) for traating gestational diabetes con exendin agonist (AAB64185-B66368) for traating gestational diabetes mellitus (GDM) in a patient, GDM arises during pregnancy, and is due combination of increased insulin resistance and adminished ability to increase insulin secretion. In contrast, in a normal corpus of the complete of the contrast, in a normal contrast, in a normal contrast, when with GDM have increased rates of Caesarian delivery.

CC pregnancies are associated with complications in both the mother and the feets. Women with GDM have increased rates of Caesarian delivery.

CC hypertensive disorders such as pre-eclampsia, and uninary tract infections. GDM results in an elevated rate of feetal abnormalities such as neural tube defects, and is associated with an increased risk of neonatal morbidites such as hypoglycaemia, hypocalcaemia, and subsequent childhood and adolescent obesity. Exendins are peptides from the salivary secretions of the Glia monster (exendin 4) and the Maxican beaded lizard (exendin -3) which exhibit homology with several members of the cliamonster (exendin 4) and the Maxican beaded lizard (abetes, which are contraindicted for GDM, exendins and exendin clabetes, which are contraindicted for GDM, exendins and expert placets of the hypoglycaemia in the newborn. They have a potent and prolonged effect on thy place and, unlike conventional insulin therapy, should not cause everage experience represents a exendin agonist of the invention which is based upon the sequence of exendin agonist of the invention which is

The patent discloses a method for modulating plasma or postprandial triglyceride and other lipid levels by administering exendin or an exendin agonist. Exendins have inotropic and diractic effects. They suppress the scretton of glucagon. Exendin and its agonists have a significant effect on the reduction of blood serum triglyceride concentrations. They are used to treat coronary heart disease and dyslipidaemia, and for modifying postprandial triglyceride levels. The present peptide sequence is an agonist of exendin.

Note: The present sequence is not shown in the specification but is derived from SEO ID NO:3 shown in page 17 of the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Use of exendin and exendin agonist compounds for modulating triglyceride levels, and treating heart disease and dyslipidemia
                                                                                         Exendin agonist; antilipemic; cardiant; triglyceride; inotropic; dinretic; coronary heart disease; dyslipidaemia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention describes a novel formulation (I) comprising an exendin or exendin agonist peptide, a buffer and an iso-osmolality modifier which has a pH of 3-7. The products of the invention have antidiabetic activity. The exendin or exendin agonist is used to increase the sensitivity of a subject to insulin to treat diabetes and disorders which would benefit from agents which lower plasma glucose levels and disorders which would benefit from agents that delay and/or slow gastric emptying or reducing food intake.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Exendin; agonist; treatment; antidiabetic; insulin sensitivity; diabetes; plasma glucose; gastric emptying; food intake.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New formulations comprising an exendin or exendin agonist peptide used for increasing the sensitivity of a subject to insulin to treat diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

This invention describes a novel formulation (I) comprising an exendin or exendin agonist peptide, a buffer and an iso-osmolality modifier which has a pil of 3-7. The products of the invention have antidiabetic activity. The exendin or exendin agonist is used to increase the sensitivity of a subject to insulin to treat diabetes and disorders which would benefit from agents which lower plasma glucose levels and disorders which would benefit from agents that delay and/or slow gastric emptying or reducing food intake.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to extendins and their agonists which have

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            been modified with molecular weight increasing agents such as polyethylene glycol (PEG). These can be used in the treatment of diabetes, obesity, impaired glucose tolerance, postprandial dumping syndrome, postprandial hyperglycaemia, eating disorders, insulin resistance syndrome, dyslipidaemia and to suppress glucagon secretion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                                                                                                                                                                                                                                  AAY17535 to AAY17624 represent exendin peptide agonists. Exendins are peptides that are found in the wonom of the Gila-monster, a lizard endogenous to Arizona and Northern Mexico. The peptide agonists are used to treat diabetes mellitus (types I or II), hyperglycaemia or hypodytocamia. They can also be used for in vitro and in vivo studies on exending and their agonists. They regulate gastric motility and slow gastric emptying (resulting in lower post-prandial glucose levels).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
      diabetes mellitus type I; diabetes mellitus type II; hyperglycaemia; hypoglycaemia; plasma glucose; gastric emptying; stomach emptying.

Exendin agonist; gestational diabetes mellitus; GDM; insulin resistance; pregnancy complication; neonatel abnormality; blood glucose modulator; insulinctropic; anorectic; exendin-4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The patent discloses a method for modulating plasma or postprandial triglyceride and other lipid levels by administering exendin or an exendin agonist. Exendins have inotropic and diuretic effects. They suppress the secretion of glucagon. Exendin and its agonists have a significant effect on the reduction of blood serum triglyceride concentrations. They are used to treat coronary heart disease and dyslipidaemia, and for modifying postprandial triglyceride levels. The present peptide sequence is an agonist of exendin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Use of exendin and exendin agonist compounds for modulating triglyceride levels, and treating heart disease and dyslipidemia

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ωī
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents a modified extendin or extendin agonist. Strendins are found in the salivary glands of the Gila monster and Mexican Beaded lizard, and have sequence similarity to glucagon-like peptides. They are used in the method of the invention. The specification describes a method for lowering plasma glucagon, comprising administering an exendin, an exendin agonist, a modified exendin or a modified exendin agonist. These compounds lower plasma glucagon level. The method is useful for lowering plasma glucagon in subjects, preferably humans, useful for mecrolytic erythema or glucagonoma. The method is also useful for treating hyperglucagonemia and other conditions that would benefit from reduced glucagon levels and/or suppression of glucagon, e.g. type 1 and type 2 diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Lowering plasma glucagon using exendin, an exendin agonist, a modified exendin or a modified exendin agonist, useful for treating hyperglucagonemia and diabetes '
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                            Extendin; Gila monster lizard; Mexican Beaded lizard; agonist; glucagon-like peptide; plasma glucagon; necrolytic erythema; glucagonoma; hyperglucagonemia; diabetes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to the use of an exendin (AAB64181-B64182) or an exendin agonist (AAB64185-B64368) for treating gestational diabetes mellitus (CDM) in a patient GDM arises during pregnancy, and is due to a combination of increased insulin resistance and a diminished ability to increase insulin secretion. In contrast, in a normal pregnancy, both insulin resistance and insulin secretion increase. GDM pregnancy, both insulin resistance and insulin secretion increase. GDM pregnancy, both insulin resistance and insulin secretion increase. GDM pregnancies are associated with complications in both the morher and the footen with GDM have increased rates of Caesaria delivery. In an elevated rate of foctal abnormalities such as pre-eclampsia, and urinary tract infections. GDM results in an alevated rate of foctal abnormalities such as neural tube defects, and is associated with an increased risk of neonatal morbidites such as hypoplycaemia, hypocalcaemia, and subsequent hypomagnesaemia, polycythaemia, hyperbilitubinaemia, and subsequent childhood and adolescent obesity. Exendin such secretions of the Gila monster (exendin 4) and the Mexican beaded lizard (exendin-3) which exhibit homology with several members of the squence contraindicated for GDM, exendins and exendin and exendin and exendin and exendin and exendin as they have a potent and prolonged effect on blood glucose, and, unlike the compounds used to treat type 2 doubly years and unlike conventional insulin therapy, should not cross the placefie and thus do not cause severe prolonged hypoglycaemia in the newborn. They have a potent and prolonged effect on blood glucose, and, unlike conventional insulin therapy, should not cause weight gain, as they inhibit gastric emptying and reduce appetite. The present sequence represents a exendin agonist of the invention which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Use of exendins or exendin agonists for lowering or reducing blood glucose levels and treating gestational diabetes mellitus in a subject, % \left( \frac{1}{2}\right) =\frac{1}{2}\left( \frac{1}{2}\right) 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  regulate gastric motility and slow gastric emptying. The peptides can used for treating e.g. diabetes or hyperglycaemic or hypoglycaemic conditions. The peptides are exendin agonists which have activity as agents to regulate gastric motility and to slow gastric emptying, as evidenced by the ability to reduce post-prandial glucose levels in mammals. They can be used for the treatment of Type I and II diabetes hyperglycaemic or hypoglycaemic conditions. They can also be used for treatment of disorders which would be benefited by agents which lower benefited with agents useful in delaying and/or slowing gastric

                                                                                                                                                                                                                                                                                              ó
                                                                                              AAY24809 to AAY24877 represent exendin agonist peptides which can regulate gastric motility and slow gastric emptying. The peptides can be used for treating e.g. diabetes or hyperglycaemic or hypoglycaemic conditions. The peptides are exendin agonists which have activity a significant to regulate gastric motility and to slow gastric emptying, as evidenced by the ablility to reduce post-prandial glucose levels in mammals. They can be used for the treatment of Type I and II diabetes and hyperglycaemic or hypoglycaemic conditions. They can also be used for the treatment of disorders which would be benefited by agents which lower plasma glucose levels and in treatment of disorders which would be benefited with agents useful in delaying and/or slowing gastric
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     рe

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention describes a novel formulation (1) comprising an exendin or exendin agonist peptide, a buffer and an iso-osmolality modifier which has a pH of 3-7. The products of the invention have antidiabetic activity. The exendin or exendin agonist is used to increase the esnettivity of a subject to insulin to treat diabetes and disorders which would benefit from agents which lower plasma glucose levels and disorders which would benefit from agents that delay and/or slow gastric emptying

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New formulations comprising an exendin or exendin agonist peptide used for increasing the sensitivity of a subject to insulin to treat diabetes -
agents to regulate gastric motility and to slow gastric emptying, as evidenced by the ability to reduce post-prandial glucose levels in mammals. They can be used for the treatment of Type I and II diabetes hyperglycaemic or hypoglycaemic conditions. They can also be used for treatment of disorders which would be benefited by agents which lower plasma glucose levels and in treatment of disorders which would be benefited by agents which hower benefited with agents useful in delaying and/or slowing gastric
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

Sequence 1, Application US/08066480
Patent No. 5424286
GENERAL INFORMATION:
APPLICANT: Eng, John
TITLE OF INVENTION: Pharmaceutical Compositions And Use of
TITLE OF INVENTION: Exendin-3 and Exendin-4 for Treatment of Diabetes Mellitus
NUMBER OF SEQUENCES: 7
CORRESPONDENCE ADDRESS:

Patent No. 6284725
SEMERAL INFORMATION:
APPLICANT: Enlers, Mario R.W.
TITLE OF INVENTION: Metabolic Intervention with GLP-1 to Improve the Function of TITLE OF INVENTION: Metabolic and Reperfused Tissue
FILE REFRENCE: P03660US1
CURRENT FILING DATE: 1999-04-30
FRIOR APPLICATION NUMBER: 05/09/302,596
CURRENT FILING DATE: 1999-10-08
NUMBER OF SEQ ID NOS: 13
SOSTWARE: Patentin Ver. 2.0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Description

US-09-003-869-183

US-09-003-869-183

Sequence 183, Application US/09003869A

Falcent No. US2002013/666A1

GENERAL INPORMATION:

APPLICANT: BEELEY, NIGEL ROBERT ARNOLD

APPLICANT: PRICKETT, KATHRYN S.

APPLICANT: PRICKETT, KATHRYN S.

TITLE OF INVENTION: USE OF EXENDINS AND AGONISTS THEREOF FOR TITLE REFERENCE: 231/181

CURRENT APPLICATION UNBER: US/09/003,869A

CURRENT FILING DATE: 1997-01-07

EARLIER FILING DATE: 1997-01-07

SARLIER FILING DATE: 1997-01-07

SARLIER FILING DATE: 1997-01-14

EARLIER FILING DATE: 1997-01-14

SARLIER FILING DATE: 1997-11-14

Sequence 69, Application US/09003869A

Patent No. US2020137666A1

APPLICANT: BEELEY, NIGEL ROBERT ARNOLD

APPLICANT: BRICKET, KATHYNN S.

APPLICANT: BRAVSAN. SUNIL

TITLE OF INVENTION: USE OF EXENDINS AND AGONISTS THEREOF FOR

TITLE OF INVENTION: THE REDUCTION OF FOOD INTAKE

FILE REFERENCE: 231/181

CURRENT APPLICATION NUMBER: US/09/003,869A

CURRENT PILLAG DATE: 1998-01-07

CARLIER APPLICATION NUMBER: US 60/034,905

EARLIER PILLING DATE: 1997-01-07

EARLIER FILLING DATE: 1997-01-10

EARLIER FILLING DATE: 1997-01-11

EARLIER FILLING DATE: 1997-01-11

EARLIER FILLING DATE: 1997-11-14

SOOTWARRE: FESTERO FOR WINDOWS VETSION 3.0

ENDOTED THE PARKEN FESTERO FOR WINDOWS VETSION 3.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 173, Application US/09003869A
Patent No. US20020137666Al
CENERAL INFORMATION:
APPLICANT: BEELEY, NIGEL ROBERT ARNOLD
APPLICANT: PRICKETY: KATHRYN S.
APPLICANT: BRACKETY: KATHRYN S.
APPLICANT: BRAVSAR, SUNIL

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 14

US-09-003-869-83

Sequence 83, Application US/09003869A

Patent No. US-20020137666A1

GENERAL INFORMATION:
APPLICANT: BELEY, NIGEL KOBERT ARNOLD
APPLICANT: BHAVSAR, SUNIL
TITLE OF INVENTION: USE OF EXENDINS AND AGONISTS THEREOF FOR
TITLE OF INVENTION: USE OF EXENDINS AND AGONISTS THEREOF FOR
TITLE OF INVENTION: USE OF EXENDINS AND AGONISTS THEREOF FOR
TITLE OF INVENTION: 1992 OF EXENDINS AND AGONISTS THEREOF FOR
CURRENT APPLICATION NUMBER: US/09/003,869A

CURRENT FILING DATE: 1997-01-07

EARLIER APPLICATION NUMBER: US 60/055,404

EARLIER FILING DATE: 1997-01-14

EARLIER FILING DATE: 1997-01-14

EARLIER FILING DATE: 1997-11-14

NUMBER OF SEQ ID NOS: 188

SOFTWARE: FASSES FOR WINDOWS VESION 3.0

SEQ ID NO 83

LENGTH: 37

WAVER. NO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Length 37;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match 76.7%; Score 92; DB 10; L. ORCANIGN: Artificial Sequence
FEATURE:
OTHER INFORMATION: artificially synthesized sequence of novel exendin
OTHER INFORMATION: agonist
OTHER INFORMATION: compound
FEATURE:
OTHER INFORMATION: xaa in positions 31, 36, 37 and 38 stands for
OTHER INFORMATION: homoproline.
FEATURE:
FEATURE:
NAME/KEY: AMIDATION:
OTHER INFORMATION:
COTHER INFORMATION: amidated Ser (Serinamide)

                                                                                                                                                                                                                                                                                                                                                                                           in plants.";

(2a) 73:1255-1266 (1993).

1- FUNCTION: ELICITS THE HYPERSENSITIVE RESPONSE (HR) IN THE PLANT

1- FUNCTION: ELICITS THE HYPERSENSITIVE RESPONSE (HR) IN THE PLANT

UPON INFECTION. HARPIN ELICITS HR IN NON-HOSTS AND IS ALSO

REQUIRED FOR PATHOGENICITY IN HOST PLANTS.

1- SUBCELLUARA LOCATION: SECRETED; VIA THE HRP SECRETION PATHWAY.

1- MISCELLANBOUS: DIFFERENT PLANTS EXHIBIT DIFFERENT LEVELS OF

SENSITIVITY TO HARPIN-PSS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   X 7 AA REPEATS OF G-G-L-G-T-P.

It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation the European Bioinformatics Institute. There are no restrictions on its
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         TRANSCRIPTION: ACTS A DIFFERENTIATION FACTOR DURING NEUROGENESIS.

- FUNCTION: ACTS A DIFFERENTIATION FACTOR DURING NEUROGENESIS.

- SUBJUIL: EFFICIENT DNA BINDING REQUIRES DIMERIZATION WITH ANOTHER BHLH PROTEIN. HETERODIMER WITH 647.

- SUBCELLULAR LOCATION: Nuclear (Potential).

- TISSUE SPECIFICITY: MOST ABUNDANT IN PANCREATIC ALPHA- AND BETA-CELLS, LESS IN BRAIN AND INTESTINE.

- SIMILARITY: BELONGS TO THE BASIC HELIX (BHLH) FAMILY OF TRANSCRIPTION FACTORS. "ATONAL" SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     15-JUN-202 (Rel. 35, Last sequence update)
